AR PL New Sung (from odosung.ttc from opendesktop-fonts-1.4.2)

This font supports English, and Chinese in both simplified and traditional forms (but not Cantonese), as well as Japanese. The cyrillic glyphs are too widely-spaced and the greek glyphs are similar and also tend to be oblique.

There is also an odosung-ExtB font which only covers basic latin (ASCII) and one CJK Extension B glyph, U+28468.

For variations of the latin, cyrillic, and greek alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For the other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

This document was prepared using X∃LATEX and fontspec. Depending on the font, missing glyphs will be replaced either by nothing at all (occasional fonts do that), a blank space, an empty box, or some other symbol indicating a missing glyph.

2 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use '...' or "..." but in good text there are variations and this font supports:

left and right single quotes '...'	and for traditional chinese and japanese
left and right double quotes "..."	corner brackets 「...」 and
single turned comma, right single quote '...'	white corner brackets 『...』

guillemets «...» and angle quotes ⟨...⟩
